Launch of the L Series Household Computerized Sewing Machines

– Assisting people new to sewing machines, allowing for handmade crafts with easy operation, low weight, and stress-free convenient functions –

JUKI has announced that it will begin selling the easy-to-use HZL-LB5100 and HZL-LB5020 household computerized sewing machines for those new to sewing machines in overseas markets from February 1.

These sewing machines are designed to simplify the operations found difficult by those new to sewing machines, from threading to finish stitching.

The threading guides on the surface of the machines use numbers to indicate how to thread the upper and bobbin threads. In addition, the automatic threading function enables the user to easily thread the needle of the machine with just one hand. Also, when sewing thick fabric, such as when sewing the top edge of a tote bag or hemming the bottoms of denim pants, functions such as the horizontally locked presser foot when starting and strong needle penetration provide support for practical sewing.

Moreover, the user can press and hold the start/stop button while sewing to switch at a super slow speed, making it easier to stop at an exact spot. In addition, making back stitches and a lock stitch can be done simply by pressing a button. The machines are designed so that beginners who are not

used to sewing machines can have a stress-free sewing experience.

The types of stitches include the frequently used straight, overedge, and buttonhole stitches (20 practical stitches for the HZL-LB5020, with 50 stitches, including decorative stitches, for the HZL-LB5100). Furthermore, some types of stitches are indicated on the front of the machine with illustrations, and others can be easily confirmed and selected by pulling out the slide.

JUKI will expand its sales by offering these two “Just it!” sewing machines for beginners.

Main functions

Function	Details
1. Strong needle penetration and seven feed dogs, as well as a horizontally arranged presser foot	With strong needle penetration and seven feed dogs, thick parts such as double-folded denim fabric can be sewn smoothly. In addition, the sewing machines are standard-equipped with a function for locking the presser foot horizontally with the needle plate when starting with a layered part, which prevents the fabric from puckering.
2. Back stitch and Lock stitch function	A dedicated button enables the user to make back stitches and lock stitches. Depending on the stitch pattern, this may be done automatically.
3. Multi-functional start/stop button	The user can start/stop sewing simply by pushing the button. In addition, the user can press and hold the button to switch to super slow speed, enabling the user to stop at an exact spot.
4. Easy pattern selection	Practical stitches such as straight and zigzag are shown on the surface of the sewing machine. Other patterns such as decorative patterns are shown on the slide stored behind the plate so that the user can pull it out to see all of the stitch types.
5. One-handed threading	With previous models, the user was required to use both hands when threading a needle. However, these machines can be threaded with just one hand because the threading device can be stopped in the lowered position.
6. Needle up/down at the push of a button	The needle can be moved to the desired spot by pushing a button without needing to turn a hand wheel.
7. Speed control	The maximum sewing speed can be set simply by sliding a

	tab. In addition, by pressing and holding the start/stop button while sewing, the user can sew at a super slow speed (70 spm).
8. Spacious work area	The spaces on both sides of the needle are the largest among medium-body machines. In addition, by making the spaces flat, it is easy to turn the fabric and perform other sewing operations.

Release date: February 1, 2016

Specifications

Specification	HZL-LB5100	HZL-LB5020
Outer dimensions	Width, height, and depth: 406mm X 298mm X 182mm	
Weight	5.6 kg	
Maximum sewing speed	700 stitches/min.	
Number of stitch patterns	100	20
Cover	Hard plastic cover	
Foot controller	Include	
Wide table	Optional
