sti/min is the abbreviation for "stitches per minute

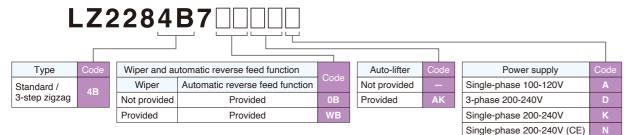

WHEN YOU PLACE ORDERS

Please note when placing orders, that the model name should be written as follows:

• LZ-2280B series (without automatic thread trimmer)

• LZ-2280B-7 series (with automatic thread trimmer)

JUKI ECO PRODUCTS The MF-3620 is an eco-friendly product which complies with JUKI ECO PRODUCTS standards for protecting the environment.

> • The sewing machine complies with the "Juki Group Green Procurement Guidelines" on the use of hazardous substances which is stricter than other restrictions, such as those of the RoHS Directive.

For details of JUKI ECO PRODUCTS, refer to: https://www.juki.co.jp/en/company/eco

2-11-1, TSURUMAKI, TAMA-SHI, TOKYO 206-8551, JAPAN PHONE: (81) 42-357-2370 FAX: (81) 42-357-2274 https://www.juki.co.jp/en

• Specifications and appearance are subject to change without prior notice for improvement. • Read the instruction manual before putting the machine into service to ensure safety

JSAE389

LZ-2280B Series High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine

The sewing machine stably produces softly finished seams with a low tension applied to the thread.

Standard model of the zigzag stitching machines

High-speed, 1-needle, Lockstitch, Zigzag Stitching Machine

MAY, 2024 Printed in Japan(TN)

$Z-2280B_{\text{Series}}$

Sewing with a low thread tension achieves soft seams with improved stability.

- The electrical control box that is integrated with the machine head is adopted for the zigzag stitching machine.
- Seam quality has been improved to stabilize the thread 2 tension (to decrease irregular stitches) and increase the efficiency of feed.
- This model further stabilizes the low-tension sewing feature 3 that has been achieved by the predecessor model.
- The improved feed mechanism enhances the efficiency of feed, 4 thereby enabling stable sewing.
- The sewing machine smoothly sews the material at its 5 multi-layered portions.

Integrated electrical control box

The LZ-2280B Series sewing machine has adopted the machine head integrated with the electrical control box and motor. In addition, the operation panel is also integrated into the machine head, thereby facilitating set-up of the sewing machine.

Direct motor

Direct drive system that is directly coupled with the main shaft is adopted. The direct motor provides increased energy savings and improved responsiveness, thereby achieving the improved features of the sewing machine such as enhanced start-up and stopping accuracy.

USB port

The sewing machine is provided as standard with a USB port that can be used for charging smartphones, etc.

- USB port

Touch-back switch

Since the electrical control box is also integrated into the sewing machine head of the model without thread trimmer, the touch-back switch, which could not been added to the sewing machine retrofitted with a commercially-available direct drive motor, is now provided as standard. Since this touch-back switch is of the rotary type, the operator is allowed to carry out sewing work with the material placed closer to the switch.

Operation panel

For the conventional LZ-2280B Series sewing machine without thread trimmer, condensation stitch and overlapped stitch cannot be set on the operation panel. Now, it comes with the machine head integrated electrical control box to enable setting of condensation stitch and overlapped stitch on the operation panel. As a result, jump sewing process and label sewing process can be carried out with ease.

machine arm jaw. The sewing machine is installed with the color tone variable type LED

sewing product or environment. This helps improve workability and reduce eye fatigue.

Maintenance

The adjustable range of the feed mechanisms has been widened, thereby upgrading the machine's responsiveness to materials

The feed mechanism has been improved by widening the adjustable

range of the height and inclination of the feed dog. The feed locus has been optimized while placing great emphasis on the feed locus at the moment the needle penetrates the material to form a stitch. The weight of the feed mechanism has been reduced by using parts most of which are made of aluminum material. This facilitates sewing of overlapped sections of material that have to be securely held between the presser foot and the feed dog during sewing.

Standard zigzag stitching machine

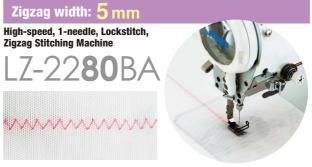

Standard / Standard wider zigzag

High-speed, 1-needle, Lockstitch, **Zigzag Stitching Machine**

The standard zigzag stitching machine creates softly finished seams. The needle rocking mechanism is provided with a triangular cam which helps produce beautiful seams with consistency.

LZ-2280BAOB

Two kinds of gauges can be selected in accordance with the application of the machine: an A-type gauge with a zigzag width of 5 mm, and a B-type gauge with a zigzag width of 8 mm.

Operation panel for the sewing

machine with thread trimme

JUKI's unique thread trimming mechanism (for LZ-2284B-7)

JUKI-specific loop spreading-structure knife sliding system enables thread trimming without fail whether needle throws to the right or the left.

Adjustment for various feed timings

Marker lines engraved on the face plate and the pictorial indication facilitate adjustment of the needle-to-feed timing and the hook timing.

Adjustment of oil quantity in the hook

Oil feeding path of the LZ-2280A Series has been reviewed to enable feeding of consistent quantity of oil.

Equipped with two different functions, the machine is available to handle a wider range of application

LZ-2284B (Standard/3-step Zigzag) and LZ-2287B (3-step Zigzag/Scallop) can perform two stitching patterns by one machine, thereby increasing the machine operation rate.

LZ-2287B0B

3-step zigzag

changeover lev

Standard/3-step zigzag stitching pattern

has been added to the LZ Series.

The hook with non-rotational bobbin eliminates sewing troubles resulting from bobbin idling. It provides a uniform bobbin thread tension at all times, thereby guaranteeing a consistent stitch formation.

e standard zigzag stitch: Effectively prevents the material swelling at the sewn as irregular stitches when sewing lace to slips, camisoles and shorts.

of thread to be wound around this bobbin is approximately 60% of that wound onventional bobbin. Therefore, this bobbin is not recommended for pattern h as three-point zigzag stitching and scallop stitching, or intape-attaching even if the stitch system is the standard zigzag stitch

ifically developed for sewing foundation garments and lingerie such as Resilon, n, and Berlon (#50, #60)

h has naps, decorative yarn of multi-fiber thread such as woolly thread, Berlon 300, and spun thread

f you want to use a non-rotational bobbin, consult your distributor beforehand
