July 6, 2006

JUKI Holds the First Comprehensive Exhibition “JUKI EXPOSITION 2006” in India.

Juki Corporation (President, Kazuyuki Nakamura) will hold "JUKI EXPOSITION", the comprehensive exposition in India, which is the first both at home and abroad.

We established, first, two liaison offices for industrial sewing machines in Bangalore and Delhi in 1995. Subsequently, we established the JUKI MACHINERY (INDIA) PVT. LTD., a sales company of industrial sewing machines in 2001, which has been first established in India as a manufacturer. We presently have 7 offices and 75 employees for sales and technical services, etc. in India. We as a manufacturer of industrial sewing machines, who has the top market share in the field of industrial sewing machines worldwide, have established an indisputable position in the apparel industry in India with its JUKI brand.

In this comprehensive exhibition, we introduce the newly developed products of industrial sewing machines, and also the products of Surface Mount Technology system and the household sewing machines, which are the JUKI's second and third principal posts, through which we will impregnate the JUKI brand not only in the industrial sewing machines business but also in all other business fields.

As you might know, India, following China, has the population of approximately 1.1 billion, the second in the world, and is a country with great potentiality in both aspects of the market and the manufacturing base. JUKI promotes the sales of Surface Mount Technology system and the household sewing machine by using the know-how and infrastructures already established in the industrial sewing machines business.
