DLM-5200N
1-needle, Lockstitch Machine with Edge Trimmer

The highly efficient lockstitch machine which assures the consistent quality of finished seams comes with a sharp knife capable of cutting various types of material.

Beautifully finished lockstitched seams.

The thread take-up, feed mechanism, and thread path have been improved so as to respond to material change. A consistent, beautiful seam finish is therefore attained.

The knife is so sharp that it can cut any type of material.

The needle is designed so that the angle can be changed as desired, allowing the knife to be easily applied to any type of material.

During operation, the type of stitching can be easily changed between lockstitch alone and lockstitch with knife. The knife can be attached by simply pressing the presser bar stroke and lockstitch with knife.

The maximum stitch length for the DLM-5200N has been increased to 5mm. The stitch length can be adjusted using the dial. The exclusive arm-shaped machine head makes the material easier to handle.

The arm shape of the machine head has been adopted to enhance ease of operation.

The operating noise and vibration of this model are far less than its predecessors. The operating environment has been greatly improved to allow the operator to work comfortably with this machine.

This model is designed as the optimum for high-speed sewing.

This model is made of special alloy steel, and a feed mechanism and system have been incorporated to make the machine the optimum for high-speed operation. As a result, this model demonstrates a consistent sewing performance during high-speed operation.

DLM-5200N
1-needle, Lockstitch Machine with Edge Trimmer

The highly efficient lockstitch machine which assures the consistent quality of finished seams comes with a sharp knife capable of cutting various types of material.

Beautifully finished lockstitched seams.

The thread take-up, feed mechanism, and thread path have been improved so as to respond to material change. A consistent, beautiful seam finish is therefore attained.

The knife can be easily changed between lockstitch alone and lockstitch with knife.

A consistent, beautiful seam finish is therefore attained.

The knife is designed so that the angle can be changed as desired, allowing the knife to be easily applied to any type of material.

During operation, the type of stitching can be easily changed between lockstitch alone and lockstitch with knife.

The knife can be attached by simply pressing the presser plate on the machine arm. The knife is removed also by the simple operation of the knob. Thus the type of stitching, such as with or without knife, can be changed with ease.

The maximum stitch length for the DLM-5200N has been increased to 5mm.

The stitch length can be adjusted by using the dial.

The exclusive arm-shaped machine head makes the material easier to handle.

The arm shape of the machine head has been adopted to enhance ease of operation.

The operating noise and vibration of this model are far less than its predecessors.

This model is designed as the optimum for high-speed operation.

This model is made of special alloy steel, and a feed mechanism and system have been incorporated to allow the operator to work comfortably with this machine.

The operating environment has been greatly improved to enhance ease of operation.
