New! **Introducing the Latest Features**

Introducing the latest JUKI-ShuHaRi features released in 2024

What is JUKI-ShuHaRi ?

This system is designed to digitalize inspection work at sewing facilities and support both users and equipment management. JUKI-ShuHaRi runs as a smartphone app and cloud app, and is available to start for free.

Inspect with the smartphone app

Manage with the cloud app

Introduction to New Features

1. It's now possible to track your sewing machines and equipment status.

Smartphone   Cloud

The status of each machine is clearly displayed in color.

Characteristics

● Check the conditions of your sewing machines and equipment anytime, from anywhere.

● It's easy to identify sewing machines that need maintenance, enabling a prompt response.

---

2. It's now possible to input overview text of the inspections and operations.

Smartphone   Cloud

The text is displayed as an "Overview."

Characteristics

● Check the inputted information on both the smartphone app and cloud app.

● Maintenance records are clearer, for smoother verification and reporting.

---

3. It's now possible to display the periodic inspections recommended by JUKI.

Smartphone   Cloud

See at a glance which inspections should be performed.

Characteristics

● Perform maintenance more efficiently by preventing inspection oversights.

● By performing the recommended inspections, you can keep your products in optimal condition at all times.

---

4. It's now possible to record a replacement history of parts related to the sewing machines.

Smartphone

Even without an inspection, JUKI-ShuHaRi confirms and records parts replacements.

Characteristics

● A record of when, who, and which part was replaced, and at what replacement frequency, is maintained.

● A user-friendly guide for the parts replacement procedure ensures correct replacements.

Introduction to Convenient Paid Functions

Machine adjustment — Part No. 40310009

Smartphone

JUKI sewing machine adjustment guide

This function gives beginners the confidence to easily make sewing machine adjustments and helps experienced users improve the efficiency of their work.

Even difficult sewing machine adjustments can be easily solved with a smartphone.

Error Code Search — Part No. 40310008

Smartphone

JUKI sewing machine error code search

When an error code appears, you can instantly check the details and find a solution.

We provide easy-to-understand support for recovery when an error occurs.

Inspection Schedule — Part No. 40310012

Cloud

Sewing machine inspection scheduling support

Easily create and manage inspection schedules and verify whether inspections have been completed.

JUKI-ShuHaRi sends out notifications on the scheduled inspections.

All Work List — Part No. 40310014

Cloud

The list of all work performed on JUKI-ShuHaRi

JUKI-ShuHaRi provides a quick overview of all operations performed, enabling more efficient maintenance management.

CSV Data can be exported as CSV files.

Paid Services **JUKI-ShuHaRi Customization Service**

JUKI-ShuHaRi offer standard inspections for JUKI sewing machines at no cost, as recommended by JUKI. We can also perform custom inspections tailored to your exact needs. With the customization service, you can receive inspections specifically designed for your requirements.

Semi-custom made

Use this service to modify standard JUKI-ShuHaRi inspections exactly as you require.

Standard: 0.95~1.05mm → Standard: 1.25~1.35mm

You can also request changes to the settings and text
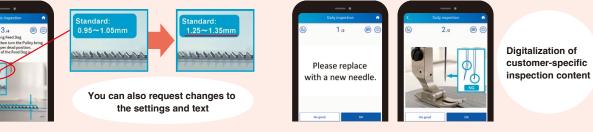

Full-custom made

This service allows you to use JUKI-ShuHaRi for your own inspections and for inspections of non-JUKI sewing machines.

Please replace with a new needle.

Digitalization of customer-specific inspection content

---

Reduce machine problems now!
Why JUKI recommends sewing machine inspection for preventive maintenance.
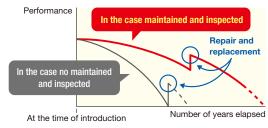

Reduce sudden failures!

Maintenance procedures such as cleaning, oiling, and consumable replacements substantially reduce the frequency of sudden machine failures.

Extend the service life of your machine!

A strictly enforced routine of proper inspections ensures the safe use of your sewing machine over an extended service life.

An example of chart of change in the service life (in years)

Performance

In the case maintained and inspected

Repair and replacement

In the case no maintained and inspected

At the time of introduction

Number of years elapsed
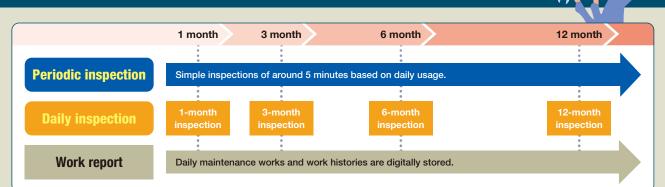

Regular sewing machine inspections will ensure higher production capacity and improved seam quality!

JUKI-ShuHaRi supports both Periodic inspection and Daily inspection

The system clearly guides the user through the machine inspection and sends a notification when the next inspection is due!

	1 month	3 month	6 month	12 month
Periodic inspection	Simple inspections of around 5 minutes based on daily usage.			
Daily inspection	1-month inspection	3-month inspection	6-month inspection	12-month inspection
Work report	Daily maintenance works and work histories are digitally stored.			

Daily inspection
can be completed in five minutes

- Simple inspections anyone can perform to keep the machine in proper running condition.
- Recommended for short periods of downtime such as before or after working hours.
- Inspection mode for easier inspections.

Periodic inspection
carried out in detail

- An inspection of deteriorated parts and defects performed in advance to prevent troubles and maintain machine performance.
- Inspections optimized based on the period of use ensure easy sewing machine management.
- An inspection mode for carrying out inspections in detail.

Work report
wherever and whenever you want

- Freely add photos and comments to your reporting data.
- Operations such as machine adjustments, parts replacements, and line changeovers can be recorded in daily work histories to facilitate sharing and confirmation.

Complete complicated inspection of the sewing machine in just 4 steps!

Capture an image of the machine nameplate to instantly launch the machine inspection.

STEP 1

Select "Daily Inspection" or "Periodic Inspection" from the "Inspection Management" menu in your smartphone app and capture an image of the sewing machine nameplate with your smartphone camera. JUKI-ShuHaRi will recognize your machine model from the image and launch the inspection. (A QR code search function is also available.)

The captured image of the nameplate automatically identifies your machine.

STEP 2

When the inspection launches, carry out the steps in sequence according to the instructions in the smartphone app.

The smartphone app guides you through the inspection with a simple sequence of images.

STEP 3
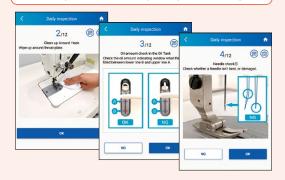

If the JUKI-ShuHaRi inspection finds that parts need to be replaced, the app draws up a list of the replacement parts required. Estimates for replacement parts can also be generated in the app.

Find details on the "Parts Estimation Function" below.

The procedure for selecting parts is easy to understand.

Specification of parts are also displayed

STEP 4
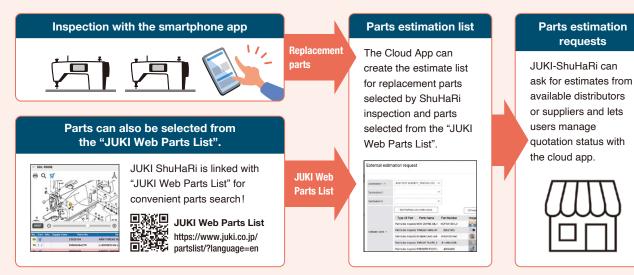

The smartphone app also clearly guides the user through the steps required for replacement parts.

Parts Estimation Function

The cloud app directly contacts distributors or suppliers to request estimates for parts by e-mail.
This function helps reduce input mistakes when entering part numbers or order quantities.

Inspection with the smartphone app

Replacement parts →

Parts can also be selected from the "JUKI Web Parts List".

JUKI ShuHaRi is linked with "JUKI Web Parts List" for convenient parts search!

JUKI Web Parts List
https://www.juki.co.jp/partslist/?language=en

JUKI Web Parts List →

Parts estimation list

The Cloud App can create the estimate list for replacement parts selected by ShuHaRi inspection and parts selected from the "JUKI Web Parts List".

Parts estimation requests

JUKI-ShuHaRi can ask for estimates from available distributors or suppliers and lets users manage quotation status with the cloud app.

Manage
with the
cloud app

Efficient management using JUKI-ShuHaRi on a PC.

Digitally managed maintenance work reduces working hours.

JUKI-ShuHaRi stores sewing machine data as required.
The data stored can also be used for making improvements,
sending reports, and analyzing work done.

(The range of retrievable data varies between the smartphone/tablet and PC-accessed apps.)

JUKI-ShuHaRi Cloud

- JUKI's unique inspection knowhow
- Number of inspections, inspection time and faulty parts
- Sewing machine and equipment conditions in the factory
- Management of inspection staff
- Number of parts replaced and sewing machine repair history
- Parts estimation history

Abundant management functions
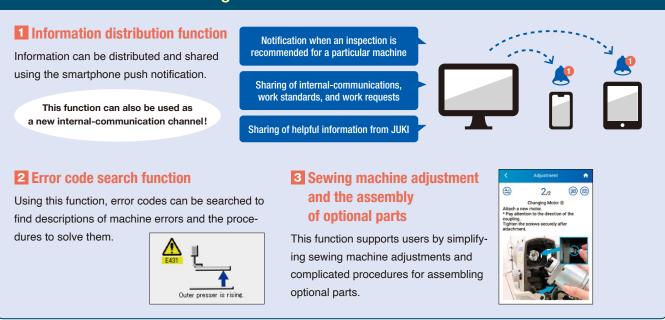

JUKI-ShuHaRi manages the sewing machines installed in the line and keeps of history of inspections by the field staff through the cloud app. Users of JUKI-ShuHaRi on the cloud can access data whenever and wherever they want.

Sewing machine management

Staff management

Line management

Parts estimation management

Analysis function

Inspection data and sewing machine data stored in JUKI-ShuHaRi are analyzed through the cloud app. Multiple data sets in combination enable various types of analysis.

Data recorded in JUKI-ShuHaRi

Number of inspections performed	Inspection time
Number of replacement parts installed	Working hours
Number of faulty parts in inspections	Number of parts estimations

Analysis of the skills of the persons in charge

Analysis of sewing machine defects

QR code management function

QR codes can be used to select a sewing machine during an inspection or operation. Equipment from other companies can also be managed with QR codes if the codes are registered.

Scan the QR code
Periodic inspection
Please shoot from the front so that the QR code is in the center of the guide.
Cancel

How to generate QR codes

QR codes can be generated using the "Print QR Code" command in the "Sewing Machine Information" section of the cloud app.

Print the QR code on the sticker paper.
(The seal mounts are not supplied with the sewing machine.)

Adhere the sticker paper with the QR code to the sewing machine to enable machine identification.

Introducing JUKI-ShuHaRi's useful new functions

1 Information distribution function

Information can be distributed and shared using the smartphone push notification.

This function can also be used as a new internal-communication channel!

- Notification when an inspection is recommended for a particular machine
- Sharing of internal-communications, work standards, and work requests
- Sharing of helpful information from JUKI

2 Error code search function

Using this function, error codes can be searched to find descriptions of machine errors and the procedures to solve them.

3 Sewing machine adjustment and the assembly of optional parts

This function supports users by simplifying sewing machine adjustments and complicated procedures for assembling optional parts.

How to start using JUKI-ShuHaRi

JUKI-ShuHaRi application form	https://www.juki.co.jp/industrial_e/service_e/shuhari/form.php

1. Enter the necessary information in the JUKI-ShuHaRi application form on the JUKI website.
2. A registration notification will arrive in your e-mail inbox when your registration is completed.
3. Read through the e-mailed instructions on how to access the cloud app and download the smartphone app.
4. Access the cloud app from your PC and add the expected JUKI-ShuHaRi users in your factory. The added users will also receive registration notifications by e-mail.
5. Download the smartphone app from the link in the registration notification and start using it.
